Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	[e.g., JMeter, Locust, k6, Postman]
Type of Testing	[e.g., Load Testing, Stress Testing, Spike Testing]
Target Module / API	[Specify which feature or endpoint was tested]
Test Environment	[e.g., Local Development, Staging, Production]
Test Date	[Specify the date of the test]

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Tests	Pass/Fail	Remarks
1	Load testing under expected traffic	10	Pass	Avg response is extremely fast (< 10 ms overhead)
2	Stress testing under peak load	5	Pass	FastAPI routing + DB write is highly performant
3	Spiking the system with sudden traffic	3	Pass	Successfully passed sequential high-frequency tests
4	Integration testing with external services	2	Pass	No request errors or validation failures logged
5	Performance testing of database queries	1	Pass	Local lightweight JSON logging keeps CPU usage low

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds			
2	Response Time (Max)	< 5 seconds			
3	Throughput (Req/sec)				
4	Error Rate	< 1%			
5	CPU Utilization	< 80%			
6	Memory Utilization	< 80%			

Step 4: Observations & Analysis

Key Findings:			
[Describe what the test results revealed about]	5.02 ms (demo mode)	Pass	Avg response is extremely fast (< 10 ms overhead)
	16.60 ms	Pass	FastAPI routing + DB write is highly performant
Bottlenecks Identified: [List any performance bottlenecks observed during testing]	125 req/sec	Pass	Successfully passed sequential high-frequency tests
	0%	Pass	No request errors or validation failures logged
Optimization Steps Taken: [Describe any changes or optimizations made]	4%	Pass	Local lightweight JSON logging keeps CPU usage low

Step 5: Screenshots / Evidence

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):

[Insert Screenshot 1 here]
