

## Project Executable Files

|                      |                                                     |
|----------------------|-----------------------------------------------------|
| <b>Date</b>          | 5 July 2026                                         |
| <b>Team ID</b>       | 6a3a555ae5895b2c9759029d                            |
| <b>Project Name</b>  | EduGenie - Google Gemini Powered Learning Assistant |
| <b>Maximum Marks</b> | 3 Marks                                             |

### Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

#### Step 1: Submission Checklist

|             |                                                                 |                                                                                                                                                     |
|-------------|-----------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>S.No</b> | <b>Item to Submit</b>                                           | <a href="https://edugenie-google-gemini-powered-learning-n2zf.onrender.com/">https://edugenie-google-gemini-powered-learning-n2zf.onrender.com/</a> |
|             |                                                                 | Not applicable - no authentication is currently implemented (single seeded default user).                                                           |
| 1           | Complete source code                                            | Docker container hosting, Render Web Services.                                                                                                      |
| 2           | README / Instructions                                           |                                                                                                                                                     |
| 3           | requirements.txt / package.json / dependency file               |                                                                                                                                                     |
| 4           | Database schema / seed files (if applicable)                    |                                                                                                                                                     |
| 5           | Environment configuration file (.env.example or similar)        |                                                                                                                                                     |
| 6           | Deployed application URL (if hosted)                            |                                                                                                                                                     |
| 7           | APK / Executable binary (if applicable for mobile/desktop apps) |                                                                                                                                                     |
| 8           | Dockerfile / Containerization config (if applicable)            |                                                                                                                                                     |
| 9           | Test files and test results                                     |                                                                                                                                                     |
| 10          | Demo video or walkthrough (if required)                         |                                                                                                                                                     |

<https://edugenie-google-gemini-powered-learning-n2zf.onrender.com/>

Not applicable - no authentication is currently implemented (single seeded default user).

Docker container hosting, Render Web Services.

## Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

[Paste or describe your folder structure here. Example:]

```

/project-root
/src    - Source code files
/tests  - Test files
/docs   - Documentation
/config - Configuration files
README.md - Setup and run instructions
requirements.txt - Python dependencies (or package.json for Node)

```

## Step 3: Deploymer

|                                    |                                                                                           |
|------------------------------------|-------------------------------------------------------------------------------------------|
| <b>Field</b>                       | Not applicable - no authentication is currently implemented (single seeded default user). |
| <b>Hosted / Deployer</b>           | Docker container hosting, Render Web Services.                                            |
| <b>Login / Credentials (Demo)</b>  | -                                                                                         |
| <b>Platform / Hosting Provider</b> | [e.g., Render, Vercel, AWS, Heroku, Azure]                                                |
| <b>Repository Link</b>             |                                                                                           |
| <b>Demo Video Link</b>             |                                                                                           |

## Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

[List required software, versions, and system requirements]

Step 1: [e.g., Clone the repository: git clone <url>]

Step 2: [e.g., Install dependencies: pip install -r requirements.txt] Step 3: [e.g., Configure environment: copy .env.example to .env] Step 4: [e.g., Run database migrations: python manage.py migrate] Step 5: [e.g., Start the application: python manage.py runserver] Step 6: [e.g., Open browser at http://localhost:8000]

<https://edugenie-google-gemini-powered-learning-n2zf.onrender.com/>

## Step 5: Known Issues

Not applicable - no authentication is currently implemented (single seeded default user).

| S.No | Known Issues                                   |
|------|------------------------------------------------|
| 1    | Docker container hosting, Render Web Services. |
| 2    |                                                |
| 3    |                                                |
